

Wall Mount Boxes

Stainless Steel Emergency and Assistance Wall Mount Boxes

DESCRIPTION

The stainless steel wall mount box provides an easy-to-see, heavy duty enclosure for the IX Series emergency call stations, used in emergency and assistance applications. Installed in a wide variety of locales such as parking garages, airports, campuses, and malls, these stations provide proper signage and specifications to meet ADA requirements. The beacon/strobe is always lit for easy visibility and flashes during an emergency call-in.

ADA (28 CFR Part 36 section 4.4.1) states that an object must not protrude more than 4" if mounted higher than 27". Since these units have the potential to include a camera, mounting height restrictions are avoided with this streamline design, while call button mounting height guidelines can still be met.

Compatible stations include: IX-DVF-2RA, IX-DVF-RA IX-SSA-2RA, and IX-SSA-RA. Refer to Models listed below for wall box configuration options.

FEATURES

- UL 514-A Listed electrical box included
- Beacon/Strobe is always lit; flashes during emergency call-in (Requires 24V DC)
- Signage on sides available in either **EMERGENCY** or **ASSISTANCE**
- ADA Compliant: 4" depth to meet ADA requirements to allow mounting higher than 27", and proper signage and call button mounting height

SPECIFICATIONS
